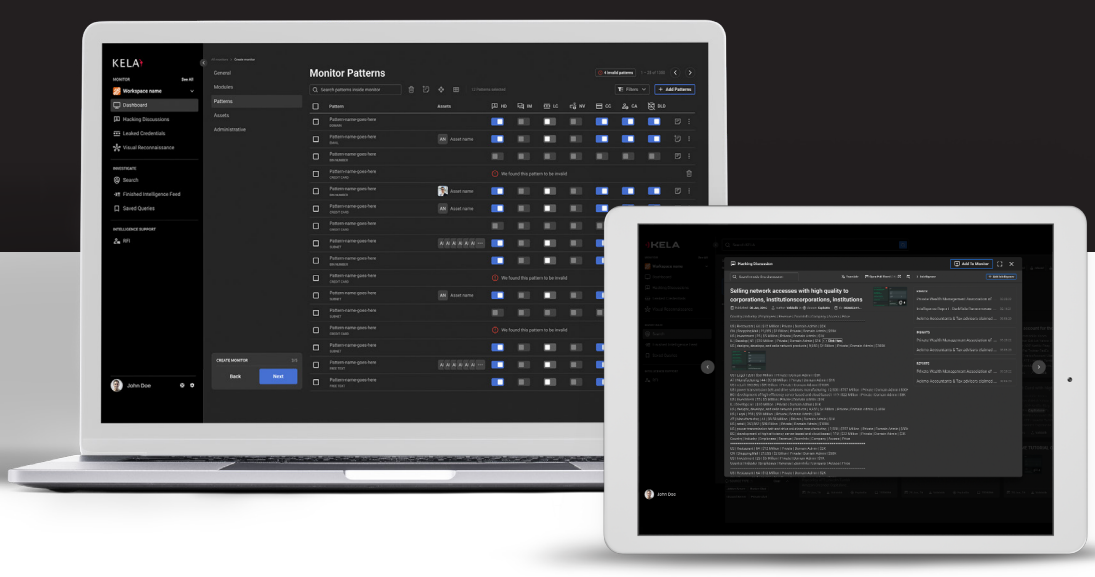
DATASHEET

KELA



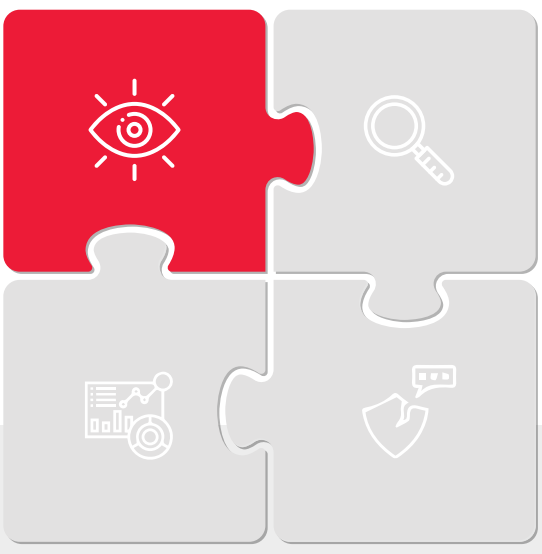
KELA MONITOR

MONITOR

Automatically monitor cybercrime sources for essential assets.

OVERVIEW

KELA's Monitor module supports operational security roles by providing attack surface and asset management capabilities. It automatically alerts on targeted threats specifically aimed at the organization by analyzing the adversary's perspective of its external attack surface and maintaining proactive network defense.



HOW IT WORKS

Extensive Source Collection

The module continuously collects intelligence from a variety of hard-to-reach sources, including forums and markets, closed instant messaging channels, and other illicit hacking services.

Sophisticated Reporting

The module automatically generates machine-readable reports on intelligence such as leaked databases, exposed ports and hosts in your network, compromised accounts or stolen credit cards.

Available, Actionable Data

Intuitive and interactive dashboards deliver timely threat intelligence focused on hacking discussions, instant messaging, leaked credentials, network vulnerabilities, compromised accounts, and additional intelligence reports.

BENEFITS

Contextualized intelligence

Tailored monitoring and alerting allow you to configure specific assets to track threats to your organization, your supply chain, your executives and your attack surface, so you can focus on the threats that matter the most.

Complete coverage

The module monitors the organization's entire attack surface, mapping the network from the outside by watching the perimeter and domains for exposed databases, open ports and other vulnerable technologies.

Improved security stack

Leverage the flexible module API to enrich other key tools in your security infrastructure such as SOAR and SIEM with targeted intelligence from the cybercrime underground.

POWERFUL FEATURES

Real-time Targeted Alerts
Automatic tracking and immediate notification of company assets-specific cybercrime threats.

Multi-user Communication
Status filtering and a messaging board facilitate communication for organizations with multiple users.

Advanced Management Capabilities
Users gain full control over their intelligence, enabling customized management of the organization's external threat landscape.

Singular Data View
Featuring all available intelligence in a unified hub, providing a clear overview of the entire external attack surface.

Actionable Intelligence
Provides specific remediation recommendations for potential threats to the organization.

Collection in Multiple Languages
Efficient detection of cybercrime threats helps users maintain a reduced attack surface.
